## AGCO Tire Sealant

AGCO Tire Sealants are made of thousands of fibers and rubber particles in uniform suspension throughout a non-toxic, environmentally safe, fluid carrier. When a puncture occurs, the escaping air forces the carrier and fibers to the penetration point making a solid, permanent repair from the inside out. There is no chemical reaction. Rim and bead leaks and inner liner porosity problems with tubeless tires will also be sealed quickly and effectively. Our special chemical formulation will condition the inner liner to prevent dry rot and cracking which can lead to chronic slow air loss and premature tire failure.

AGCO Tire Sealants feature:

- Maintained air pressure & puncture sealing up to 1/4"
- Rim & bead sealing
- Lower service costs
- Rust prevention for wheels and rims
- Less downtime
- Rated to -5° F

Install the sealants in new equipment or during preseason or postseason service programs as a cost-effective preventative maintenance tool.
