WHY IS THE ENDURACAM RIGHT FOR ME?

If you're looking for a ruggedized camera system that can withstand anything and everything you can throw at it, then you're in the right place.

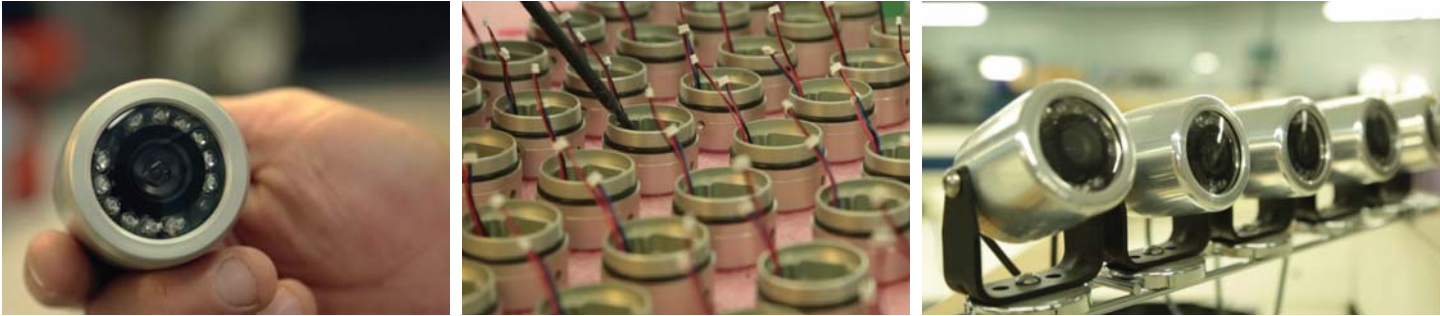

The EnduraCam camera system is the most durable, dependable and user friendly camera system available to the industrial, military and public works market today.

The EnduraCam's sister product, the AgCam, was initially designed for harsh use in the agricultural market, giving the EnduraCam the genetics to give you the quality you have been searching for.

EnduraCam cameras are available with your choice of focal distances and viewing widths, ranging from a 3.6mm lens with a 92° field of view; perfect for a backup or side view camera, up to a 16mm lens, offering a 15° field of view, allowing for excellent viewing in surveillance applications.

When you add in the wide variety of adaptor cables that allow you to hook up to nearly any third party monitor available, the EnduraCam is the right product at the right price.

See What's Behind You

WHY DO PEOPLE LOVE ENDURACAM?

The EnduraCam system has been designed and manufactured to give you a product that will last for years, even in the harshest environments. With cameras that are 100% waterproof, 10G shock and vibration certified and feature an unmatched 3 year warranty, there is no better camera for use in even the toughest situations.

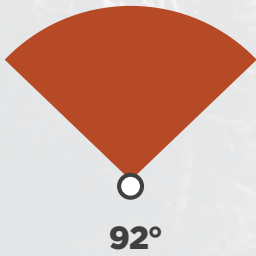

With most electronics being imported from overseas, Dakota Micro is proud to manufacture the EnduraCam cameras in North America.

WHAT IS THE DIFFERENCE BETWEEN NTSC AND PAL?

NTSC and PAL are two types of color encoding systems. NTSC delivers a frame rate of 30 frames per second (fps) at an aspect ratio of 720x480. PAL utilizes a frame rate of 25 fps and an aspect ratio of 720x576.

NTSC video standard is popular in North America and Japan, while PAL format is more common in countries such as the UK, Australia and Sweden.

WHAT IS THE BEST RESOLUTION FOR AN ANALOG CAMERA?

The maximum possible resolution over analog composite video is 720x480 for NTSC and 720x576 for PAL. Any additional resolution above that means that information has to be “removed” in order to send it to the receiving monitor. While many modern analog cameras boast frame rates of 700 or 800 lines of resolution, in reality, anything over 480 lines is removed before it reaches the screen and gives you no added visual benefit.

ENDURACAM ACCESSORIES

The EnduraCam camera line also offers a wide variety of accessories giving you many new options such as the ability to record, all the way to making your camera feed wireless.

Since we here at Dakota Micro, Inc. claim to build the toughest camera around, we feel it's our responsibility to test it appropriately. Our methods may not always be orthodox, or come with pedigreed certification (we have them too, but they're BORING!), but they are usually interesting, sometimes comical, and always answer our burning question... Can We Break it™?

Take a look, be entertained and realize that you simply cannot live without one of these cool cameras...and it's built here in the USA.

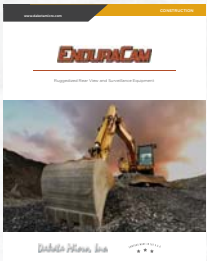

CanWeBreakIt™ is brought to you by Dakota Micro, Inc. Proudly bringing you products with more reliability, more capability and more profitability.
